

Elite privacy and intelligence services for people with everything to lose.

Digital Obscurity from ObscureIQ

Our Digital Executive Protection program exposes hidden risks in your personal threat surface with a bespoke audit, then minimizes your attack surface with a deep data wipe.

Visibility is threat.
Obscurity is power.

The Stakes: Why It Matters Now

Every exposed data point is a liability. Every online trace is a potential weapon.

Even a small trace of exposed data can spiral into reputational damage, digital harassment, or physical risk. ObscureIQ's Digital Executive Protection program is built for high-profile individuals - executives, founders, and public figures - who need to stay private, protected, and in control.

For our clients, privacy isn't a preference. It's operational security.

Our Privacy + Intelligence Services Stack

01: Threat Surface Mapping

Footprint Audits reveal your full digital exposure. This is a threat surface many still neglect and includes: data brokers, the dark web, and public records. Clients are amazed (and sometimes horrified) by what's out there and easily accessible.

02: Deep Data Suppression

Footprint Wipe and Bespoke Deletes remove traceable information. No one offers a wider or deeper deletion service.

03: Threat Investigations

We provide offensive OSINT research on stalkers, harassers, and threat actors.

04: ThreatWatch: Active Threat Monitoring

Get real-time alerts when you've been doxxed or threatened. We scan for leaks and threats with the best tooling, adding our own proprietary systems. The coverage is wide: social media, news, darknet forums, paste sites, the clear net, and more. We detect patterns, context, intent, location. AI and human review escalate verified risks to you fast.

05: Strategic Consulting

We offer training and advice for clients as well as their family members, and internal security teams. We even train organizations.

Why ObscureIQ?

Built by Intelligence and Privacy Professionals. Trusted by High-Stakes Clients.

Powered by proprietary tech and CODEX, an exclusive dataset of over 8,600 surveillance orgs.

Operated by world-class privacy and threat researchers with unique knowledge.

Trusted by executives, politicians, activists, celebrities, and cybersecurity firms.

Our Process

- **Onboard & Profile:** You give us your basic identifiers. We take it from there.
- **Map & Assess:** We surface every traceable threat - across public web, data brokers, dark web, and OSINT datasets. Our Audits reveal risks and ferret out lost selectors.
- **Wipe & Suppress:** We execute high-volume removals and bespoke deletions based on your risk profile. Selectors found in your Audit aid in a deeper delete.
- **Monitor & Defend:** Continuous scanning and real-time threat alerts keep you ahead of the next breach. Proprietary processes + the best tooling available.
- **Empower & Advise:** We train your team and provide long-term strategies for maintaining your edge.

Privacy x Intelligence: The ObscureIQ Equation

Most firms specialize in either hiding information or finding it. We do both.

ObscureIQ fuses **elite privacy advocacy** - data deletion, legal leverage, and deep broker ecosystem knowledge - with **advanced open-source intelligence** (OSINT) capabilities.

We don't just erase your trail; we understand exactly how that trail is followed, profiled, and weaponized.

This **rare combination** allows us to defend more aggressively, respond more intelligently, and deliver results others can't. When privacy and intelligence work in tandem, your footprint shrinks faster - and your defenses grow sharper.
